Precision, Reliability and First-Pass success.

Video Laryngoscope UED-A Series with Single Use Blade

In high-pressure environments like operating theatres and emergency departments, airway management must be reliable, precise and efficient.

Engineered for excellence, our video laryngoscope with single-use blade combines advanced infection control with unmatched performance, giving clinicians the confidence to manage even the most difficult airways.

Video Laryngoscope UED-A Series with Single Use Blade

Unique Features

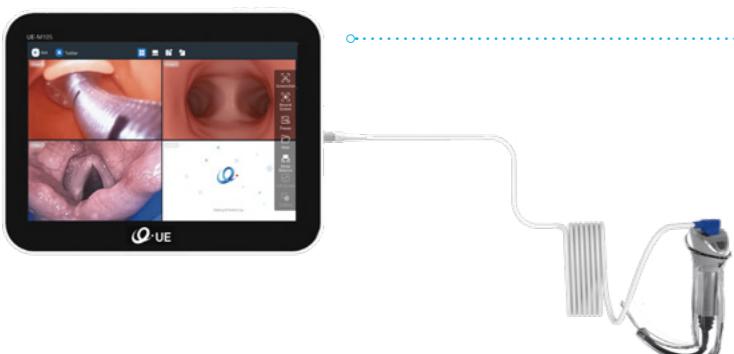

UED-M3S Touch screen offering image mirroring, auto shutdown after 10mins of inactivity, fast access to photos and videos, large storage capacity and Wi-Fi ready to allow real-time screen sharing.

8" and 10" Monitor

Crystal-clear visualisation on a 8" or 10" monitor means fewer doubts and faster decisions when every second counts. Perfect for teaching, routine and difficult airway emergencies, this adaptable system supports your technique and enhances confidence in critical care. Simply insert the HD cable directly into the laryngoscope handle and connect to the monitor. In addition, the 10" monitor offers Wi-Fi capability and split screen sharing providing enhanced visual flexibility.

In neonatal and paediatric intubation, where precision is paramount, removing the smaller 3" monitor creates a lighter, more agile device with a reduced footprint—giving clinicians superior manoeuvrability and an unobstructed field of vision.

④ Infection Control & Patient Protection

Single-use blade minimises cross-contamination risk and reduces sterilisation burden making it an ideal solution for acute care settings

④ Clinical Confidence & Performance

High-definition video ensures clear glottic visualisation, even in difficult airways. Enhances first-pass success rates for better patient outcomes

④ Workflow Efficiency

Quick setup and disposal streamline airway management workflows, reducing turnaround time between cases

④ Ergonomic & User-Friendly Design

Lightweight, intuitive interface for ease of use across all skill levels. Comfortable grip for routine and complex intubations
