U-100 Insulin

FOR USE BY A QUALIFIED CLINICIAN. THE BELOW IS ONLY A SUGGESTION AND FACILITY PROTOCOL MUST BE FOLLOWED FOR ALL CLINICAL PROCEDURES WHERE THIS PRODUCT IS USED.

CAUTION

For single use only
DO NOT use if the package or product has been damaged or contaminated.
DO NOT store at extreme temperatures and humidity, avoid direct sunlight.

STEPS:

1. Holding the insulin syringe with the cap still on, pull back the plunger to the line on your syringe for the required dose.
2. Insert the needle into the rubber top of the insulin vial.
3. Always measure from the top of the syringe plunger. Push the air into the vial.
4. Pull back the plunger to the line on your syringe for the insulin dose prescribed.
5. Tap the syringe with your finger to move air bubbles to the top. Then push gently on the plunger to push all of the air bubbles back into the vial.
6. Remove the syringe from the vial and check for correct dose.
7. Select desired location for the injection and follow facility protocol to prepare skin.
8. Use thumb and index finger (or middle finger) to gently lift (not grab) the skin fold and avoid lifting accompanying muscle.
9. Inject into the raised tissue at 90 degrees. Keep the skin fold raised as the insulin is administered.
10. Once full dose has been administered, remove needle and dispose of syringe immediately into sharps bin/container as per facility protocol.
