UR062500 Urine Bags

DESCRIPTION

m|devices hospital Urine Bag is provided sterile and consists of a non-return valve, needleless sample port, T-Tap, integrated reinforced hanger, 120cm length of tubing and a 2500mL volume capacity.

The T-Tap end allows for ease of use to empty the Urine Bag and the clear incremental measurements allow for precise visual urine output.

THE BELOW IS ONLY A SUGGESTION AND FACILITY PROTOCOL MUST BE FOLLOWED FOR ALL CLINICAL PROCEDURES WHERE THIS PRODUCT IS USED.

- Single use.
- DO NOT re-sterilise.
- D0 N0T store at extreme temperatures and humidity, avoid direct sunlight. Handle with care.
- STERILE (E0), D0 N0T use if the package or product has been damaged or contaminated.
- EU Notice: any serious incident that has occurred in relation to the device should be reported to the manufacturer and the competent authority of the Member State in which the user and /or patient is established.

STEPS

- 1. Perform hand hygiene.
- 2. Remove bag from the packaging and check that the T-Tap at the distal end of the bag is closed.
- Using aseptic technique, remove cap from the drainage tubing and connect directly into the funnel of the urinary catheter.
- 4. Ensure the connection is secure.
- 5. Hang the bag at or below the patient's bladder level.

TO EMPTY THE URINE BAG

- 1. Perform hand hygiene and don gloves.
- 2. Place a receptacle directly under the T-Tap of the Urine Bag.
- 3. Holding the T-Tap in one hand, with fingers on either side of the tap, gently push against the mechanism to slide the tap across the T connection to open the tap to allow the urine to empty.
- 4. Once the bag is empty, repeat the above step but in the opposite direction to close the tap.

ACCESSING THE NEEDLELESS SAMPLE PORT

- Swab needleless sampling port with an approved antiseptic wipe as per facility protocol. Allow to completely dry.
- Close slide clamp on tubing below sample port.
- Using a sterile luer slip syringe, insert directly into the sampling port and twist to engage and secure connection. Withdraw desired volume of urine for sample.
- Remove syringe from sampling port. Repeat above steps each time the sampling port is accessed.

PRECAUTIONS

- Ensure the Urine Bag is never raised higher than the level of the bladder.
- Ensure the Urine Bag tubing is free from kinks at all times when connected to the catheter.
- At the completion of emptying the bag, check to ensure the T-Tap is completely closed.
- Ensure aseptic technique is maintained when handling, connecting and disconnecting the Urine Bag from the urinary catheter.
